**Adolescent Mental Health in The Middle East and North Africa** Jun 25 2019 This 2-volume set focuses on adolescent health in the Middle East and North Africa region (MENA), and presents the latest research on the health risk behaviours and social behaviours that adolescents from the MENA region engage in. While there has been a surge in peer-reviewed research publications on population health in the MENA region in the last couple of decades, very few books offer a resource to address the diverse negative influences that disproportionately affect adolescents and children in the MENA region, including increased tobacco consumption culture, low emphasis on physical activity, increased sedentary behaviours, weak health policies, and societal issues related to displacement and political conflicts. These books offer a synthesis of current knowledge on adolescent health issues in the MENA region, and aim to provide evidence-informed adolescent health care practices that address current issues related to mental, physical, reproductive and nutritional health. Volume 1 focuses on mental health in the MENA region, the development and implementation of youth friendly public policies, and how to strategize in the age of COVID-19. The study will aid health care professionals, policy makers, government organizations and health program planners to assess current policies and practices related to adolescent health in the MENA region, and to identify the best courses of action moving forward.

Ending Discrimination Against People with Mental and Substance Use Disorders Mar 27 2022 Estimates indicate that as many as 1 in 4 Americans will experience a mental health problem or will misuse alcohol or drugs in their lifetimes. These disorders are among the most highly stigmatized health conditions in the United States, and they remain barriers to full participation in society in areas as basic as education, housing, and employment. Improving the lives of people with mental health and substance abuse disorders has been a priority in the United States for more than 50 years. The Community Mental Health Act of 1963 is considered a major turning point in America's efforts to improve behavioral healthcare. It ushered in an era of optimism and hope and laid the groundwork for the consumer movement and new models of recovery. The consumer movement gave voice to people with mental and substance use disorders and brought their perspectives and experience into national discussions about mental health. However over the same 50-year period, positive change in American public attitudes and beliefs about mental and substance use disorders has lagged behind these advances. Stigma is a complex social phenomenon based on a relationship between an

attribute and a stereotype that assigns undesirable labels, qualities, and behaviors to a person with that attribute. Labeled individuals are then socially devalued, which leads to inequality and discrimination. This report contributes to national efforts to understand and change attitudes, beliefs and behaviors that can lead to stigma and discrimination. Changing stigma in a lasting way will require coordinated efforts, which are based on the best possible evidence, supported at the national level with multiyear funding, and planned and implemented by an effective coalition of representative stakeholders. *Ending Discrimination Against People with Mental and Substance Use Disorders: The Evidence for Stigma Change* explores stigma and discrimination faced by individuals with mental or substance use disorders and recommends effective strategies for reducing stigma and encouraging people to seek treatment and other supportive services. It offers a set of conclusions and recommendations about successful stigma change strategies and the research needed to inform and evaluate these efforts in the United States.

*School Mental Health* Oct 22 2021 "This book related to fundamental recognitions that 1) children, adolescents, and families usually make no or very poor connections to specialty mental health (see Atkins et al. 1998; Catron, Harris, & Weiss, 1999), 2) schools are where children and youth are, and 3) many advantages accrue when education, mental health, and other youth-serving systems join together to better meet the mental health needs of students, in ways that reflect reducing and removing barriers to learning (Andis et al., 2002; Weist, 1997). National and global networks are increasingly recognizing the centrality of the SMH agenda as reflected in increasing funding, growing training opportunities, key policy initiatives, and an advancing research base that involves localities, states, regions and countries pursuing common themes"--

**Adolescent Mental Health** Jan 13 2021 Adolescence is a period of rapid growth, maturing individuality, vulnerabilities and fortitude. Fortunately, most youths go through this period of life in a healthy way, but some do not. *Adolescent Mental Health: Prevention and Intervention* is a concise and accessible overview of our current knowledge on effective treatment and prevention programs for youths who have developed, or are at risk of developing, mental health problems. Ogden and Hagen's introduction to "what works" in the promotion of adolescent mental health addresses some of the most common mental health problems among young people, and how these problems might be prevented or ameliorated through professional and systematic efforts. The volume illustrates contemporary and empirically supported interventions and prevention efforts through a series of case studies, and covers some of the most prevalent mental health conditions affecting today's youth; externalizing, internalizing and drug use problems. Within an ecological and transactional framework, the book discusses how psychopathologies may develop and the risks and protective factors associated with these. The problem-oriented perspective on risk and mental health problems is combined with a focus on social competence and other protective factors. *Adolescent Mental Health: Prevention and Intervention* will be essential reading for students and practitioners in the fields of child welfare and mental health services, and any professionals working with adolescents at risk of developing mental health problems.

**Management Problems in Health Care** Oct 02 2022 The treatment and the solution of health economic problems by using management concepts is a permanent challenge; the question of controlling the costs or the efficiency of the supply of medical services is concerned. The articles in this book hope to make a concrete contribution to this subject by reporting on the latest research the authors have made in this area. The medical services involved can either be part of the general provision of medical care and treatment to the population or can be provided by hospitals which are complex systems of public health care. The division of the contents of this book reflects this distinction. The four articles in Part A are concerned with problems of general health care. Part B is dedicated to particular problems relating to hospital planning and contains five articles. In Part A the first article by Heidenberger deals with 'Optimal Resource Allocation in Horizontally and Vertically Disaggregated Health Programs' Using corresponding model formulations and linear programming the problem is solved of how a fixed budget should be distributed among the measures of a social health program so that the control of an illness is as effective as possible. In the case in question the illness to be controlled is high blood pressure. The possibilities for using this type of approach in health programs to combat other illnesses are obvious.

**Maternal and Child Health** Apr 15 2021 Our current era of globalization, war, and socioeconomic unrest has revealed public health as a worldwide concern and a major frontier for social justice with maternal and child health at its epicenter. Yet, there has been a relative scarcity of training resources specifically dedicated to this crucial area. "Maternal and Child Health: Global Challenges, Programs, and Policies" addresses this gap in current knowledge by analyzing the range of socioeconomic and environmental factors, health care disparities, politics, policies, and cultural practices that impact the health and safety of mothers, as well as the well-being and optimum development of their children. Individual sections focus on unequal distribution of the world's resources, politics and power, specific disease concerns, programs, policies and emerging concerns with a focus on what is currently being done, and what needs to be done to improve the health status of women, children, and adolescents. The book's contributors are some of the world's most respected experts, carefully selected to represent different global geographic regions and diverse professional disciplines related to maternal and child health from both academic and field practice perspectives. Among the topics in this authoritative volume: The impact of war, globalization, gender inequity, and harmful traditional practices (e.g., female genital mutilation). Specific health concerns, including tuberculosis, malaria, HIV, and malnutrition. Child and adolescent health issues, from abuse and neglect to children in difficult circumstances. Pregnancy-related issues: safety, abortion and post-abortion care, teen pregnancy, and more. Strategies for planning, developing, and maintaining maternal and child health systems in developing countries. The status of global initiatives, such as Integrated Management of Childhood Illnesses and the Millennium Development Goals. The status of evidence-based maternal and child health in the developing world. With such a wealth of information on both practical and conceptual levels, "Maternal and Child Health: Global Challenges, Programs, and Policies" is as relevant to students and researchers in the field as it is to policy makers and those working for global health and development organizations. It also makes an excellent stand-alone text for courses in global health in general and global maternal and child health in particular.

**The Practice of Health Program Evaluation** Jan 25 2022 As more and more money is spent developing programs and services to solve health problems, how can one know if a specific health program works or what it would take to improve it? Aimed at addressing this issue, *The Practice of Health Program Evaluation* provides readers with the methods to evaluate health programs and the expertise to navigate the political terrain so as to work more effectively with decision makers and other groups. To convey these principles, Grembowski uses the metaphor of evaluation being a three-act play with a variety of actors and interest groups, each having a role that involves entering and exiting the "stage" at different points in the evaluation process.

**Strengths-based Prevention** May 17 2021 A new way of thinking about prevention that focuses on building assets and resources This book provides practitioners and researchers with the means to make more impactful choices in the design and implementation of prevention programs. Drawing from state-of-the-art research on a range of behavior problems such as violence, drug abuse, suicide, and risky sexual activity, Victoria Banyard and Sherry Hamby present a strengths-based approach to prevention. Historically, most prevention efforts have focused too much on admonishment and knowledge transfer, despite years of evidence that such programs are ineffective. Effective prevention must be grounded in a broad understanding of what works, what does not, and how different forms of risky behavior share common elements. This book synthesizes research on behavior change from a variety of disciplines, including psychology, public health, sociology, criminology, resilience science, critical race theory, and even urban planning. It emphasizes the importance of building enough protective strengths to insulate people from risks.

Challenges in Program Evaluation of Health Interventions in Developing Countries Apr 27 2022 Health interventions that are effective in developed countries may not be as effective in developing countries given the differing social, economic, cultural, and infrastructure factors that may affect a program's implementation and outcomes. This monograph is intended to promote an understanding of why program evaluation is a critical component of any health intervention and to stimulate discussion on ways to make evaluation of health interventions in developing countries more rigorous.

**The Future of Public Health** Sep 01 2022 "The Nation has lost sight of its public health goals and has allowed the system of public health to fall into 'disarray'," from The Future of Public Health. **Health Professions Education** Jun 29 2022 The Institute of Medicine study Crossing the Quality Chasm (2001) recommended that an interdisciplinary summit be held to further reform of health professions education in order to enhance quality and patient safety. Health Professions Education: A Bridge to Quality is the follow up to that summit, held in June 2002, where 150 participants across disciplines and occupations developed ideas about how to integrate a core set of competencies into health professions education. These core competencies include patient-centered care, interdisciplinary teams, evidence-based practice, quality improvement, and informatics. This book recommends a mix of approaches to health education improvement, including those related to oversight processes, the training environment, research, public reporting, and leadership. Educators, administrators, and health professionals can use this book to help achieve an approach to education that better prepares clinicians to meet both the needs of patients and the requirements of a changing health care system.

**Homelessness, Health, and Human Needs** May 29 2022 There have always been homeless people in the United States, but their plight has only recently stirred widespread public reaction and concern. Part of this new recognition stems from the problem's prevalence: the number of homeless individuals, while hard to pin down exactly, is rising. In light of this, Congress asked the Institute of Medicine to find out whether existing health care programs were ignoring the homeless or delivering care to them inefficiently. This book is the report prepared by a committee of experts who examined these problems through visits to city slums and

impoverished rural areas, and through an analysis of papers written by leading scholars in the field.
