POSHAN's abstract digest on maternal and child nutrition research - Issue 37 May 05 2020 Issue 37 of the Abstract Digest brings to you a set of global, regional, and India-focused articles on issues pertaining to undernutrition and its solutions. Global studies include the Optima Nutrition modelling assessing the likelihood of 129 countries reaching the global nutrition targets by 2030, a systematic review of economic evaluation of interventions to address undernutrition by scaling up proven interventions and identifying priority interventions, a study that identifies research priorities for social, behavioral and community engagement interventions for maternal and child health, and a review of literature on social accountability approaches. India-specific studies examine inequality in child undernutrition among urban populations, the economic feasibility of nutritionally adequate diets, and two studies focusing on frontline workers' time use and factors influencing their performance. In this edition we have

also included implementation research focused articles relevant for maternal and child health programs.

Nurse Anesthesia Nov 10 2020 Nurse anaesthesia continues as a growing area among the allied health fields. Consisting of approximately 750 multiple-choice questions in board format, this title in the Specialty Level series is designed to help candidates prepare for the nurse anaesthesia certification exam. It covers all areas currently identified on the board exam outline, and includes charts and tables which help reinforce the material presented. Correct answers are provided along with detailed explanations referenced to current texts and journals.

Chronic Fatigue Syndromes Nov 30 2019 Chronic Fatigue Syndrome (CFS) is now a recognized major and international medical concern. Neglected

for many years because of its puzzling wide range of symptoms and inability to be “slotted” into any single mainstream medical discipline, CFS has gained government, academic, and public attention. In this innovative book, Dr. Jay Goldstein provides a medical narrative of an “evolving theory” of how the symptoms of CFS may develop through dysfunction of numerous physiological pathways. He describes the biologic basis of these assumptions, and, based on an analysis of basic medical principles, leads the reader to logical conclusions. In addition, Dr. Goldstein reveals a wealth of clinical experience by describing successes and failures of various therapies and discusses the reasons for the outcomes. Dr. Goldstein’s private practice is devoted to patients who fit the profile of a CFS sufferer. As a result, his extensive clinical experience has given him a unique hands-on perspective not readily available to most researchers. *Chronic Fatigue Syndromes: The Limbic Hypothesis* carefully reviews the extant research literature in each chapter. Although Dr. Goldstein cautions that this model should be viewed only as a PROMISING FOUNDATION for future research, no less than six peer reviewers, all leading researchers and clinicians in the CFS field, have endorsed the direction of Dr. Goldstein’s bold proposition. The breadth and scope of this book is perhaps best summarized by Paul Cheney, MD, PhD, a national leader in the field: “Despite its long history, the medical establishment with its great advances in biotechnology has been largely unable to crack the basic pathophysiology of the chronic fatigue syndrome. . . . Dr. Goldstein’s new book takes us to a place few people know well, and describes a plausible mechanism of injury to the deep brain which could explain every symptom seen in [patients with] chronic fatigue syndrome. . . . It is the unifying power of his hypothesis, together with emerging scientific support for this view, that makes this book an important one to read for both the patient with CFS, as well as the practitioner and medical scientist who attempt to understand it.”

How We'll All Be Equally Rich, Famous, Brilliant, Etc., Forever May 17 2021 Lewis Mancini, M.D., posits that all past, present, and future earthlings will become extremely wealthy, famous, intellectually brilliant, and immortal via reproducible out-of-body experiences, brain stimulation, the Internet, GPS, and other scientific and technological advances. These developments will all take place within the remainder of the current century. Moreover, the mind or soul of all earthlings will be revealed to be ageless and deathless, while the notion of death will be revealed to be nothing more than a cruelly punitive illusion foisted upon us by an envious universe filled with angry Earth-watchers who resent the actual center-stage status of our planet. All human mind particles, regardless of earthly birth date, stick together for eternity due to the forces that exist between and among us. These forces include the strong nuclear force, the weak nuclear force, electro-magnetic attraction, gravity, and the force of sentimental affection or love by which all conscious, subconscious, and even unconscious particles are (at least potentially) strongly motivated. Mancini's work is the exploration of the concept of the human mind particle, a possible interface between science and religion, and the ultimate future for all residents

of earth.

How to Navigate the Minefield That Is Dementia with Your Loved One Oct 02 2022 How to Navigate the Minefield That Is Dementia with Your Loved One: A Guide Born of Experience is a book that I felt called to write. As a physician and one well versed in geriatrics, I thought I knew how to navigate the system to get dementia care for my husband. I was very wrong. Dementia is a worldwide epidemic. At the moment, there is no cure. Our understanding of the disease process is incomplete and appears multifactorial. Everyone knows or loves someone who has been afflicted with it. The very thought of dementia is met with fear and avoidance. Little information is available to the lay public. This book is written for a lay audience. In my view, knowledge is power, and my goal is to empower the general public with basic knowledge of the disease and what steps can be taken to deal with it with confidence. It is written in three parts. Part 1 is a memoir designed to introduce you to Ollie, and I and tell the story of what we experienced in our journey both before and during the dementia years. Part 2 is a scientific literature review, written in lay terms, describing the most common types of dementia and the most up-to-date information on diagnosis, cause, prevention, and treatment. References are provided mostly from 2018 through 2020. The third part is designed to help the caregiver understand where and how to get help for loved ones without destroying themselves both physically and financially. This is a book that will help you if you are already caring for a dementia patient. It may help you even more if you are not yet in that situation, because you will need this information along the way in your life journey.
