Practical Guide to Single-use Technology Jan 25 2022 Single-use technology (SUT) is now available for all processing operations within the biopharmaceutical industry. It has the potential to reduce capital costs, improve plant throughput and reduce the risk of cross-contamination. However, there are no clear guidelines to aid the end-user on implementation of these technologies into a validated, good manufacturing practice (GMP) environment. This book is the first comprehensive publication of practical considerations for each stage of the implementation process of SUT, and covers the selection, specification, design and qualification of systems to meet end-user requirements. Serving as an introduction and practical reference to this growing area of application within the biopharmaceutical industry, this handbook presents: An approach for SUT implementation within an end-users facility with examples for bioreactors, tangential-flow filtration and fill-finish systems; SUT within the context of regulatory guidance, such as ICH Q8, Q9, Q10 and GMP; Strategy for standardisation of single-use bag systems and assessment of extractables and leachables; Specifications of user requirements and design of specific SUT alongside process descriptions and flow diagrams; Strategies and tools to evaluate risk with examples of risk assessments applicable to design, processing and product quality; and Qualification approach for different SUT types. With the information presented in this book, engineers, researchers and professionals involved in biopharmaceuticals will be better prepared to plan and make effective decisions to design and implement SUT.

Injection Molding Alternatives Aug 20 2021 "This book offers a comprehensive description of a wide range of processes that can be used to manufacture plastic products. It covers variations of injection molding techniques in addition to other industrial plastic processing technologies and low volume production techniques used for prototyping and preproduction volumes. Process innovations such as gas-assist injection molding, multi-live feed molding, deep-draw blow molding, and in-mold decoration are also included. The coverage of each process includes the fit, advantages, disadvantages, materials used, design considerations, applications and tooling considerations." --Back cover.

Applications and Innovations in Expert Systems VI Nov 10 2020 R. MILNE Intelligent Applications Ltd The papers in this volume are the Application Papers presented at ES98, the Eighteenth International Conference of the British Computer Society's Specialist Group on Expert Systems. This year has been yet another "applications" success for the conference with this volume containing seventeen papers describing either deployed applications or emerging applications. All these documented case studies provide clear evidence of the success of AI technology in solving real business problems. Six of these papers were nominated for the Best Application Award during the review process. These nominations were then reviewed by the members of the Programme Committee to select the winning paper. The papers in the volume were subject to refereeing by at least two referees. All papers which were controversial for some reason were discussed in depth by the Application Programme Committee. Ten referees from the industrial and commercial sector and nine referees from the academic sector assisted me in reviewing the papers. The review form asked the referee to score the papers according to a number of dimensions, to rate it overall, and to offer critical comments to me, and to the authors. It also asks the referee to score their expertise in the area of each paper they review. Only reviews from 'expert' referees are used.

The Design Agenda Jan 13 2021 UK Design lies between the worlds of culture and commerce, between passion and profit. Design is indeed a passion for things, offering methods that enable them to come into being. It follows that design should also aspire to a passion for the people who use these things, for their quality of life, their aspirations: a passion for betterment. The management of design is about fostering that passion and linking it to the fulfilment of corporate goals and profitability. The Design Agenda explains why it is necessary and how it can be done. This clearly written book: draws on the best methods to provide practical guidance on effective design management contains a unique resource guide to enable further study and research contains contemporary examples to illustrate the value of well managed design In combining practical advice with a theoretical overview the book represents an ideal introductory text for a range of design students and an excellent source of information to middle managers in retail and manufacturing industries.

Childhood and Markets Nov 22 2021 This book explores how young children and new families are located in the consumer world of affluent societies. The author assesses the way in which the value of infants and monetary value in markets are realized together, and examines how the meanings of childhood are enacted in the practices, narratives and materialities of contemporary markets. These meanings formulate what is important in the care of young children, creating moralities that impact not only on new parents, but also circumscribe the possibilities for monetary value creation. Three main understandings of early childhood – those of love, protection and purification – and their interrelationships are covered, and illustrated with examples including food, feeding tools, nappies, travel systems and toys. The book concludes by re-examining the relationship between adulthood and the cultural value of young children, and by discussing the implications of the ways markets address young children, also examines the realities of older children in consumer culture. Childhood and Markets will be of interest to students and scholars of sociology, childhood studies, anthropology, cultural studies, media studies, business studies and marketing.

Human Factors and Ergonomics in Consumer Product Design Aug 08 2020 Every day we interact with thousands of consumer products. We not only expect them to perform their functions safely, reliably, and efficiently, but also to do it so seamlessly that we don't even think about it. However, with the many factors involved in consumer product design, from the application of human factors and ergonomics principles to reducing risks of malfunction and the total life cycle cost, well, the process just seems to get more complex. Edited by well-known and well-respected experts, the two-volumes of Handbook of Human Factors and Ergonomics in Consumer Product Design simplify this process. The first volume, Human Factors and Ergonomics in Consumer Product Design: Methods and Techniques, outlines the how to incorporate Human Factors

and Ergonomics (HF/E) principles and knowledge into the design of consumer products in a variety of applications. It discusses the user-centered design process, starting with how mental workload affects every day interactions with consumer products and what lessons may be applied to product design. The book then highlights the ever-increasing role of information technology, including digital imaging, video and other media, and virtual reality applications in consumer product design. It also explores user-centered aspect of consumer product development with discussions of user-centered vs. task-based approach, articulation and assessment of user requirements and needs, interaction with design models, and eco design. With contributions from a team of researchers from 21 countries, the book covers the current state of the art methods and techniques of product ergonomics. It provides an increased knowledge of how to apply the HF/E principles that ultimately leads to better product design.

The Business Leader's Guide to the Low-carbon Economy Jan 05 2023 Rising energy prices and concerns about climate change are driving us towards a new kind of economy - a low-carbon economy. What will this low-carbon economy be like, and what does your business have to do to prosper in this new business environment? Larry Reynolds shows how successful organisations are already learning to be more energy efficient, manage their carbon footprint, adapt to climate change and become truly sustainable. As well as explaining how to future-proof your organisation against possible threats, The Business Leader's Guide to the Low-carbon Economy, tells you how to make the most of the many opportunities that the low-carbon economy will bring, especially in growing profits from new products and services. It is your guide to creating an organisation that will thrive in the twenty-first century. While there are plenty of published books about 'going green', there are none which explain the low-carbon economy and how to thrive in it. This book will fill that important gap. Drawing on examples from across industries, including businesses such as Asda, BT, Cargill, Coca Cola, Co-operative Group, Eurostar, Marks and Spencer, Tesco, Tesla, Walker's Crisps, Walmart and ZipCar, Larry Reynolds shows how today's successful organisations are already benefiting from the coming low-carbon economy.

Management guide for sustainable production of frankincense Oct 02 2022 This guide is intended for frankincense producers, extension workers and companies engaged in producing frankincense. Gum olibanum (frankincense) from *Boswellia papyrifera* (Del.) Hochst has been collected and traded for centuries. Although production levels in Ethiopia fall far short of the country's potential, export volume and earnings from frankincense have been significantly increasing since the late 1990s. But knowledge regarding the biology and ecophysiology of the tree, the frankincense collecting process and post-harvest handling remain largely inadequate.
