Fully revised and expanded, it covers emerging technologies possible with the improvement in ultrasound equipment. 3-D monitoring of ovarian follicles, bidirectional vibrant color and Doppler, and improved 3-D and 4-D imaging of reproductive structures are discussed. MRI-guided ultrasound procedures are covered, and comparisons of 3-D imaging with MRI imaging for uterine anomalies is reviewed with an emphasis on the advantages of 3-D performed in the gynecologist's office, and as a less expensive modality. The overall approach of the original edition is maintained, starting with ultrasound safety and technique and diagnosis of the ovary, uterus and fallopian tubes (both normal and pathologic), followed by both male and female infertility and ART treatments and procedures. Ultrasound monitoring of follicular development, the endometrium, and as an aid in embryo transfer to maximize IVF success rates are reviewed. Topics new to this edition include updated information on the diagnosis of benign and malignant adnexal masses, 3-D follicle monitoring, and the diagnosis of adenomyosis and endometriosis, including deep inseminated endometriosis. Additionally, the evaluation of endometrial receptivity, the use of contrasts for fallopian tube patency, controversies regarding septate uterus versus arcuate uterus with the use of 3-D ultrasound, and 3-D ultrasound with saline infusion sonogram and early pregnancy ultrasound are all discussed. An excellent resource for reproductive medicine and ART specialists, gynecologists and ultrasonographers alike, *Ultrasound Imaging in Reproductive Medicine, Second Edition* covers all that clinicians need to know about the role of ultrasound, from the first time a woman comes into the clinic for treatment, including ART, to early pregnancy monitoring. *Bosnian :Ethics of Assisted Reproductive Medicine: A Comparative Study of Western Secular and Islamic Bioethics* Mar 31 2020 Bioethics has developed over the last few decades into a major field of inquiry. With advances in medicine progressively transforming our understanding of what constitutes life, there is need for a medical ethics to address many of the issues and challenges arising, particularly in the fields of genetics and reproduction. Of central significance are serious moral dilemmas confronting medical experts which require a theological perspective. Yet it is secular bioethics that is defining what constitutes human life and it is secular bioethics that is influencing policy on matters which concern us all and are likely to have grave societal impact. Is it right for a woman to act as surrogate for her sister? Or for a childless couple to resort to artificial insemination by donor? What does Islam have to say?

**Ethics in Reproductive Medicine** Dec 21 2021 Medical ethics is a difficult and controversial field and that part of it dealing with reproductive medicine is no exception. Our first conference on philosophical ethics in reproductive medicine (PERM 1) in 1988 discussed many of the

controversies in this field. The acclaim it received encouraged us to organise PERM 2 but choosing a relevant and topical programme was a clairvoyant challenge in its own right. Since PERM 1 we have seen a number of developments, in the UK and internationally, that have thrown the problems that society must face into sharp relief. Drawing on the expertise of contributors from science, many medical specialities, philosophy, theology and economics, we have sought to address the issues raised by these new developments, as well as a number of long-standing issues that remain as contentious as ever, but of undiminished significance. On the scientific front, the long-predicted technique of embryo biopsy and diagnosis is now a reality. This has prompted the inclusion of some of the topics addressed by this second conference.

Further, the book covers various areas of growing importance, such as how to access the uterine cavity; the future of imaging in reproduction; non-invasive prenatal testing; ART and male infertility; as well as breast cancer and fertility preservation.
