Automated Machine Learning Jan 15 2021 This open access book presents the first comprehensive overview of general methods in Automated Machine Learning (AutoML), collects descriptions of existing systems based on these methods, and discusses the first series of international challenges of AutoML systems. The recent success of commercial ML applications and the rapid growth of the field has created a high demand for off-the-shelf ML methods that can be used easily and without expert knowledge. However, many of the recent machine learning successes crucially rely on human experts, who manually select appropriate ML architectures (deep learning architectures or more traditional ML workflows) and their hyperparameters. To overcome this problem, the field of AutoML targets a progressive automation of machine learning, based on principles from optimization and machine learning itself. This book serves as a point of entry into this quickly-developing field for researchers and advanced students alike, as well as providing a reference for practitioners aiming to use AutoML in their work.

Mental Action and the Conscious Mind Jul 21 2021 Mental action deserves a place among foundational topics in action theory and philosophy of mind. Recent accounts of human agency tend to overlook the role of conscious mental action in our daily lives, while contemporary accounts of the conscious mind often ignore the role of mental action and agency in shaping consciousness. This collection aims to establish the centrality of mental action for discussions of agency and mind. The thirteen original essays provide a wide-ranging vision of the various and nuanced philosophical issues at stake. Among the questions explored by the contributors are: Which aspects of our conscious mental lives are agential? Can mental action be reduced to and explained in terms of non-agential mental states, processes, or events? Must mental action be included among the ontological categories required for understanding and explaining the conscious mind more generally? Does mental action have implications for related topics, such as attention, self-knowledge, self-control, or the mind-body problem? By investigating the nature, scope, and explanation of mental action, the essays presented here aim to demonstrate the significance of conscious mental action for discussions of agency and mind. Mental Action and the Conscious Mind will be of interest to scholars and graduate students working in philosophy of mind, philosophy of action, and philosophy of agency, as well as to philosophically inclined cognitive scientists.

*The Challenge for Africa Dec 14 2020 In this groundbreaking work, the Nobel Peace Prize-winner and founder of the Green Belt Movement offers a new perspective on the troubles facing Africa today. Too often these challenges are portrayed by the media in extreme terms connoting poverty, dependence, and desperation. Wangari Maathai, the author of *Unbowed*, sees things differently, and here she argues for a moral revolution among Africans themselves. Illuminating the complex and dynamic nature of the continent, Maathai offers "hardheaded hope" and "realistic options" for change and improvement. She deftly describes what Africans can and need to do for themselves, stressing all the while responsibility and accountability. Impassioned and empathetic, *The Challenge for Africa* is a book of immense importance.*

*Bodies Beyond Borders Dec 02 2019 The human body in scientific and artistic representations Around 1800 anatomy as a discipline rose to scientific prominence as it undergirded the Paris-centred clinical revolution in medicine. Although classical anatomy gradually lost ground in the following centuries in favor of new disciplines based on microscopic analysis, general anatomy nevertheless remained pivotal in the teaching of medicine. Corpses, anatomical preparations, models, and drawings were used more intensively than ever before. Moreover, anatomy received new forms of public visibility. Through public exhibitions and lectures in museums and fairgrounds, anatomy became part of general education and secured a place in popular imagination. As such, the anatomical body developed into a production site for racial, gender, and class identities. Both within the medical and the public sphere, art and science continued to be closely intertwined in anatomical representations of the body. *Bodies Beyond Borders* analyzes the notion of circulation in anatomy. Following anatomy through different locations and cultural domains permits a deeper understanding of its history and its changing place in society. The essays in this collection focus on a wide variety of circulating ideas and objects, ranging from models and body parts to illustrations and texts. Together, the essays enable rethinking the relations between metropolis and colony, university and fairground, and scientific and artistic representations of the human body.
